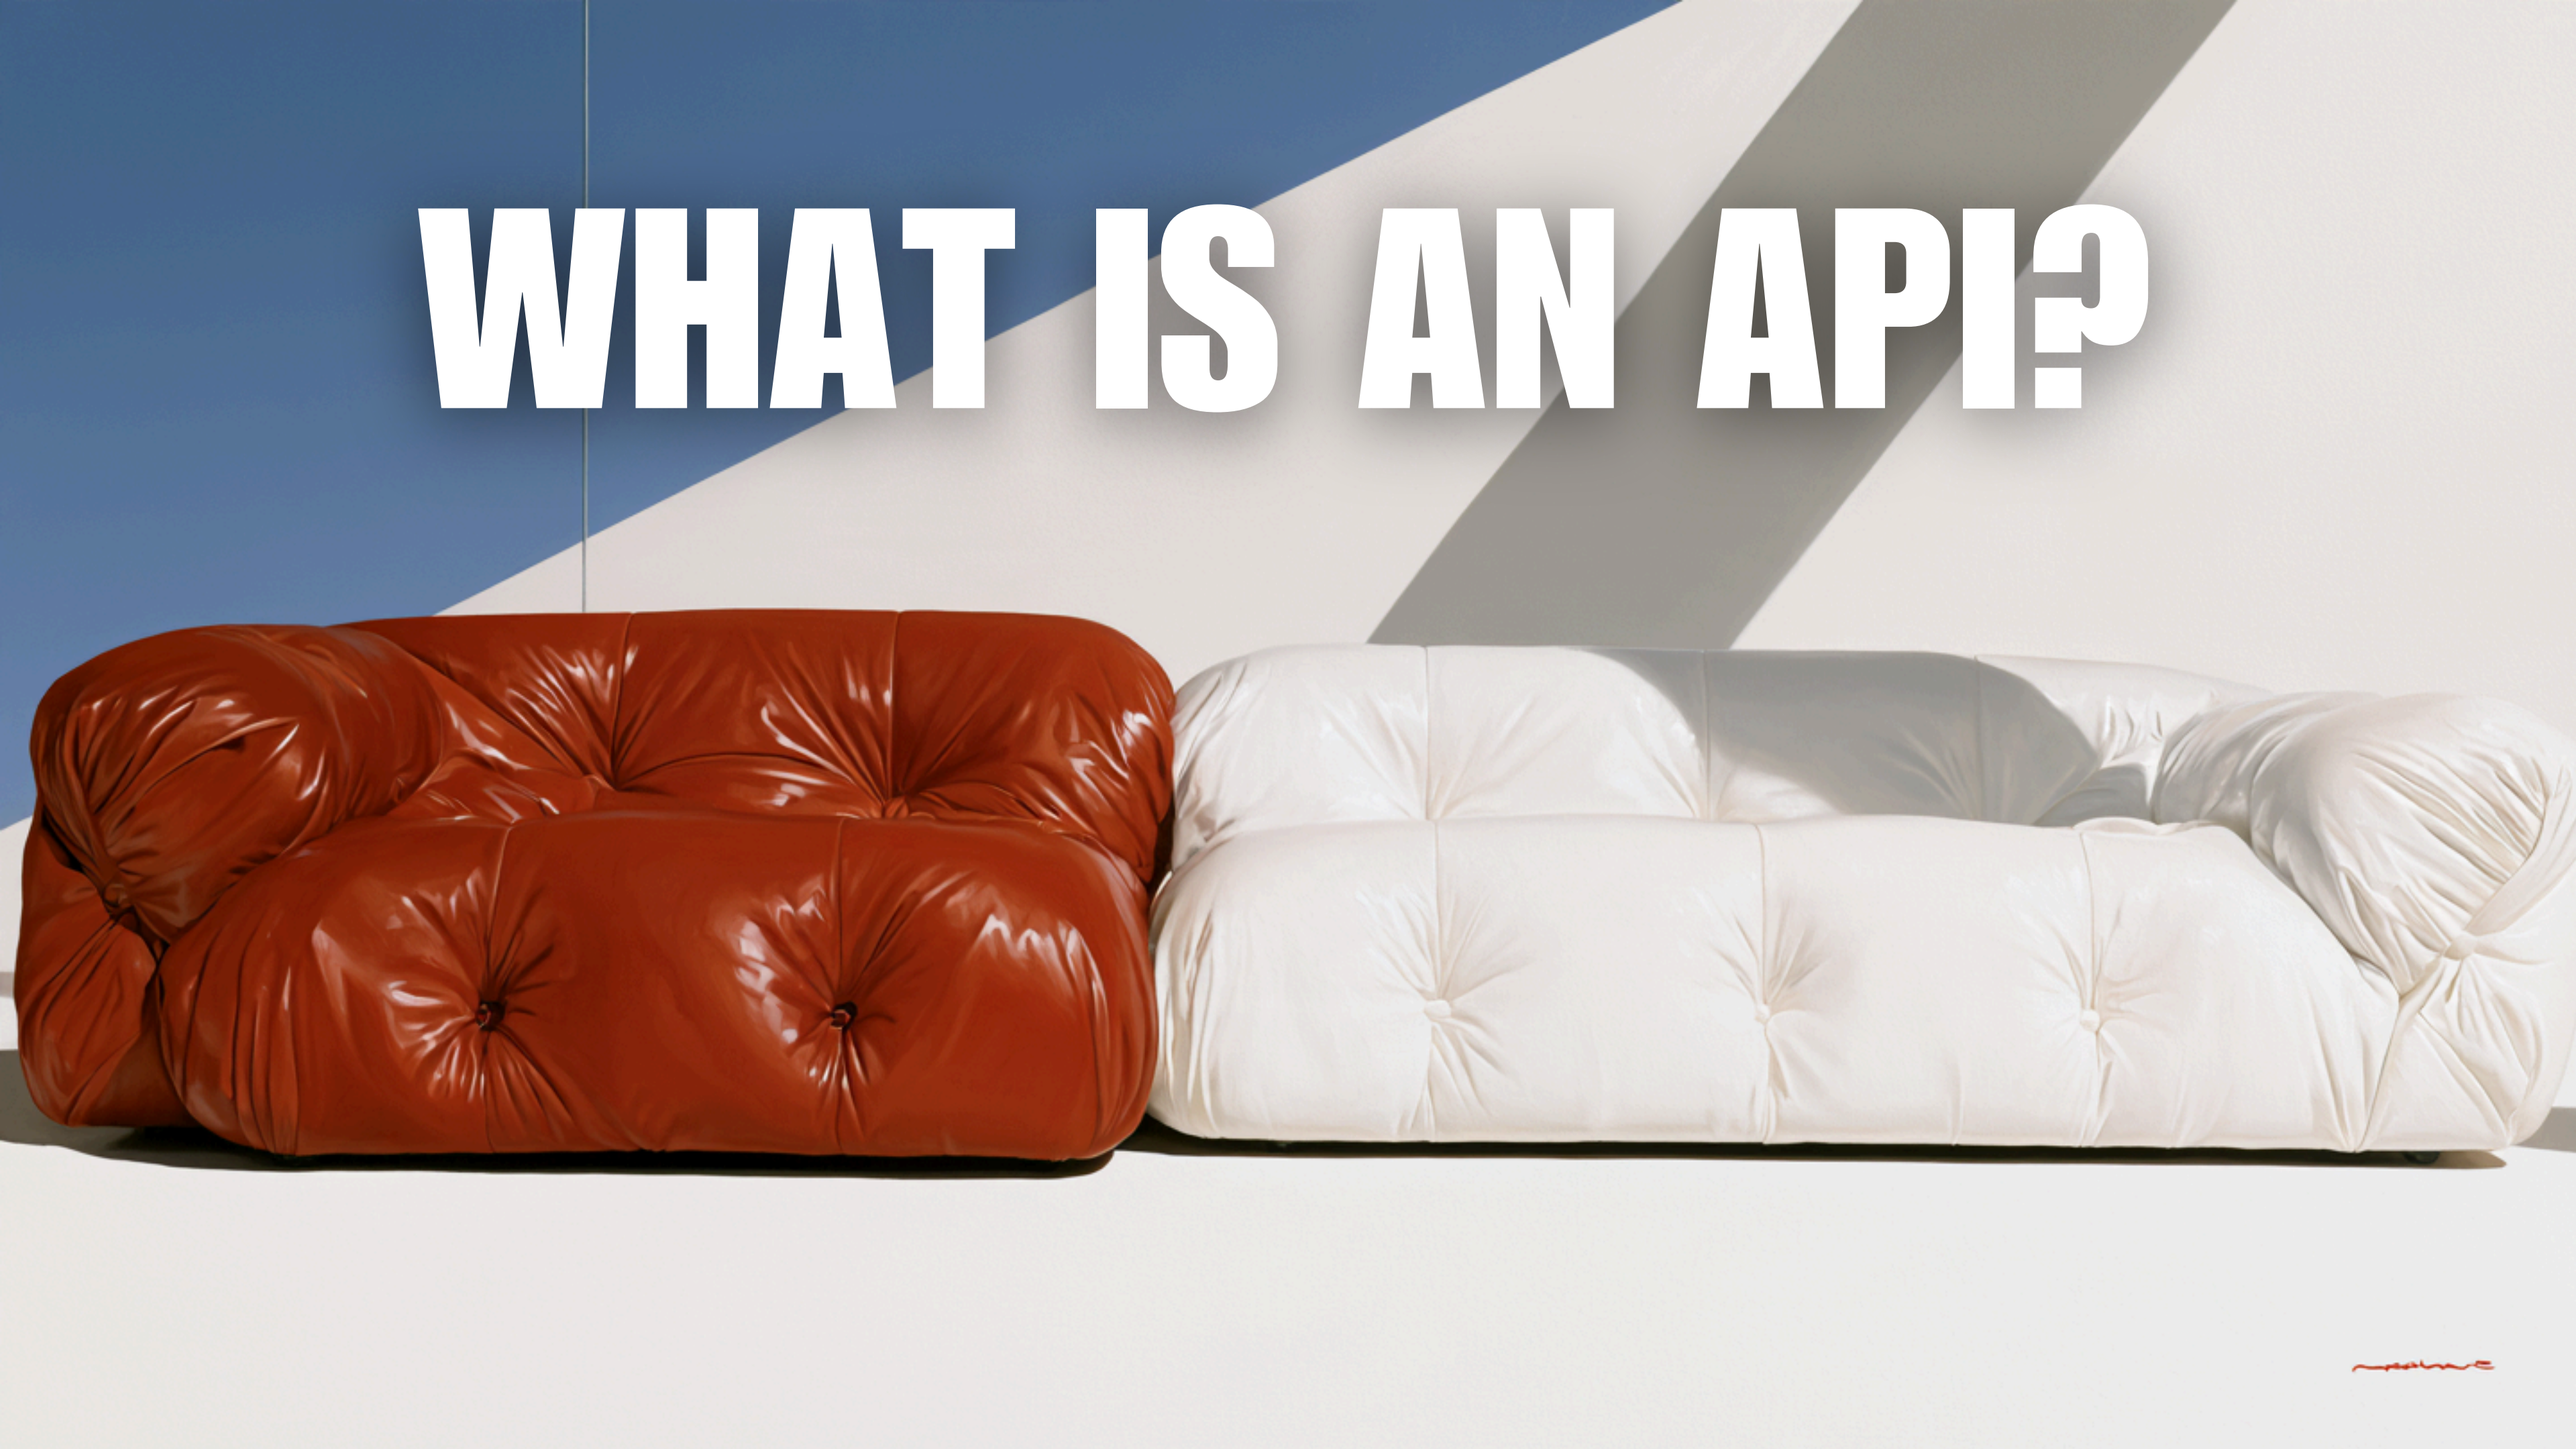
WHAT IS AN API?



API = A WAY FOR ONE PROGRAM TO ASK ANOTHER FOR DATA

THINK OF IT AS A RESTAURANT

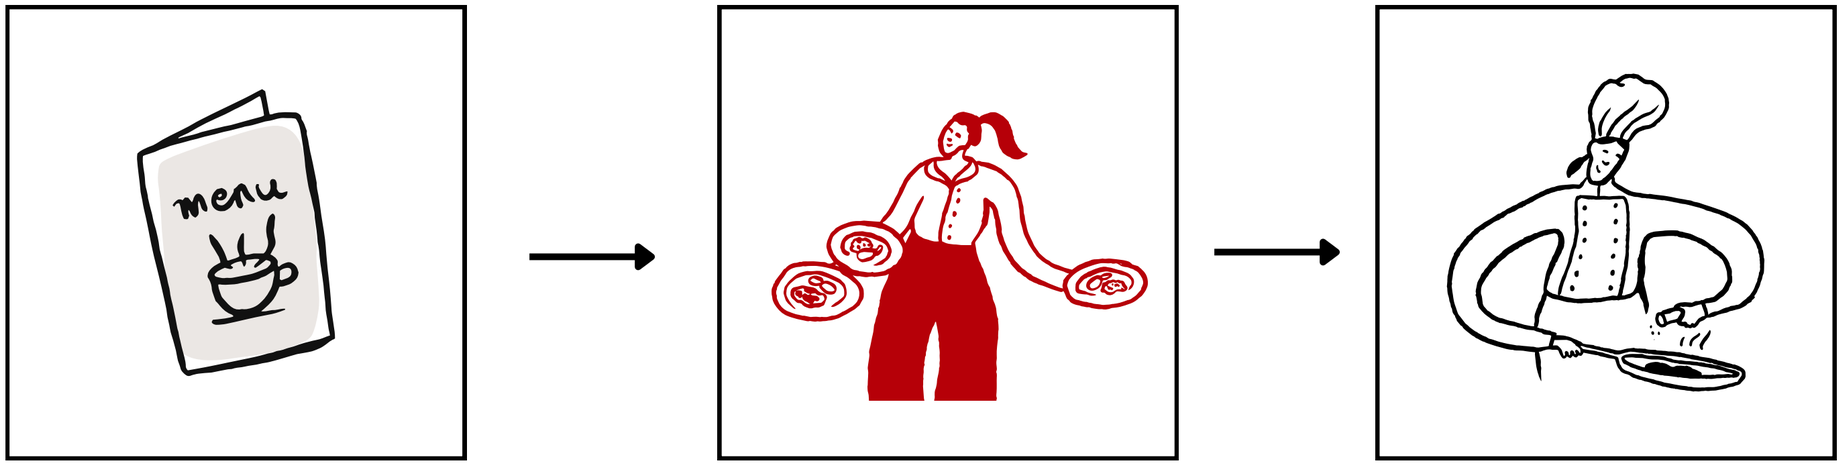
WEBSITE

IS THE GUEST

ORDER

THROUGH AN URL

API



SENDS BACK

AS JSON

HOW DID I IMPLEMENT THE API ON MY WEBSITE?

STEP 1: CHECKING THE YEAR AND ADDING THE ADDRESS TO THE API

```
const year = new Date().getFullYear();    // årtalet just nu, t.ex. 2026
const url = "https://date.nager.at/api/v3/PublicHolidays/" + year + "/SE";
```

new Date().getFullYear	Asks the **computer's clock** what year it is → 2026
year + "/SE";	The year is added automatically, **so the code works every year**

https://date.nager.at/api/v3/PublicHolidays/2026/SE

STEP 2:GETTING THE
HOLIDAYS FROM THE API

fetch(url)	Sends the request to Nager.Date
await	Waits for the answer before moving on
response.json()	Turns the JSON answer into a list JavaScript can read

```
const response = await fetch(url);        // skicka förfrågan
const holidays = await response.json();   // svaret blir en lista med helgdagar
```

STEP 3: FINDING CHRISTMAS DAY

holidays.find(function (holiday) {

Search all the dates one by one

return holiday.date.endsWith("-12-25");
});

Finds the correct date for Christmas in the API

```
// find() letar upp juldagen (25 december) i listan
const christmas = holidays.find(function (holiday) {
  return holiday.date.endsWith("-12-25");
});
```

STEP 4:
COUNTING
BACK 14 DAYS

```
// Sista beställningsdag: 14 dagar före juldagen
const christmasDate = new Date(christmas.date);
const deadline = new Date(christmasDate);
deadline.setDate(deadline.getDate() - 14);
```

deadline = new Date(christmasDate);	Turns the text "2026-12-25" into a real date the computer can count with
deadline.getDate() - 14);	25 - 14 = 11
deadline.setDate(...)	Moves the date back: **new deadline is December 11th**

STEP 5: CHOOSING THE RIGHT MESSAGE

if (daysLeft > 1)	More than 1 day left → **“Order within 38 days to get your painting before Christmas.”**
else if (daysLeft === 1)	Exactly 1 day left → **"Last day to order for delivery before Christmas!"**
else	0 days or less → **"Orders placed now will be delivered after Christmas."**

```
} else if (daysLeft === 1) {
  box.textContent = "Last day to order for delivery before Christmas!";
} else {
  box.textContent = "Orders placed now will be delivered after Christmas.";
}
```

STEP 6: IF THE API WON’T LOAD

ERROR MESSAGE:

```
} catch (error) {
 box.textContent = "The Christmas countdown could not be loaded. Check your internet connection and reload the page.";
 console.error(error);
 }
```

THANK YOU!
